Reasons for an Allowance

COMES NOW the Patent Office and states at least a reason for the Allowance of this Application: to Wit: that the Prior Art neither teaches nor in any reasonable combination suggests a method of forming a composite wire having a diameter greater than about 15 microns and least than about 100 microns and consisting of a gold alloy annulus surrounding a wire core comprising an electrically conductive non-noble metal the method comprising assembling a composite billet consisting essentially of a core of the non-noble metal, an intermediate layer of the gold alloy and an outer metal layer, extruding the composite billet with force to form a composite rod comprising corresponding core, intermediate and outer metal layers, wherein the core fraction measured by cross-sectional area of the cylinder defined by the core and intermediate layer of the rod is essentially the same as the corresponding core fraction of the billet. Removing the outer metal layer of the composite rod, drawing the composite rod to form a first composite wire having a diameter between about 0.5 and 5 mm and a core fraction essentially the same as the core fraction of the composite rod, drawing the first composite wire to form a second composite wire having a diameter between about 15 and about 100 microns and a core fraction essentially the same as the core fraction of the first composite wire.

FURTHERMORE the Patent Office Saith not.
